

CAREER PROFILE

Professional Platform Support Engineer with 7+ years of experience in full-stack development, DevOps, and SRE. Skilled in automation, production support, CI/CD, and observability across both cloud and on-prem environments. Strong foundation in software engineering principles, with practical experience designing, developing, and maintaining scalable, maintainable applications throughout the full development lifecycle. Proactive in staying current with industry trends, sensitive to evolving technology landscapes, and committed to continuous learning and innovation.

WORKING EXPERIENCES

Platform Support Engineer (SRE & DevOps)

2023 - Present

IAG, Christchurch

- Support six core platforms including two AWS-based and four on-prem ecosystems, servicing over 160 microservices.
- Build and maintain CI/CD pipelines using Jenkins/GitHub Actions to enable safe, automated deployments.
- Improve platform reliability through synthetic testing, monitoring, and alerting.
- Proactively identify opportunities and gaps, leading automation initiatives that reduce toil and save 800+ hours last year.
- Built a Python LLM-based incident triaging app that automates ticket classification and remediation using log and ticket data.
- Created a self-service web portal allowing business users to independently resolve data validation issues without contacting support.
- Manage containers and orchestration (Docker, Kubernetes) in both cloud and on-prem environments.
- Work with a broad range of technologies including AWS (EC2, S3, DynamoDB, Lambda), Azure Cosmos DB, GDP, Mule API, Kafka, ActiveMQ.
- Participate in on-call rotations to provide 24/7 support, quickly troubleshooting and resolving critical production issues to minimize downtime.
- Contribute to knowledge sharing and team growth by mentoring junior staff, delivering automation demos, and peer reviewing platform changes.

Software Engineer

2018 - 2023

FIS, Christchurch

- Delivered full-stack features in Agile sprints while actively participating in planning, code reviews, testing, and customer communication.
- Code on full stack development (Knockout.js with Typescript / .Net, C# / SQL, Oracle) and peer reviewing.
- Prepare, design and present tech solution at tech approach meetings before a new project / feature kicked off.
- Write, monitor and maintain unit/integration/ac/UI/performance tests in dev, test and UAT environments.
- Excel in triaging queries & issues, troubleshooting and communicating effective workarounds and solutions to customers.
- DevOps experience in executing and maintaining scripts, services, infrastructures (VMs & Docker Containers) for CI/CD and IDP usages.
- Create and maintain internal plugins/tools for improving development productivity shared by Wiki pages and videos.
- Mentor juniors and graduates.

Software Engineer Intern

2017 - 2018 Summer

Weta Workshop, Wellington

- Developed and Dockerized Ftrack plugins and a Confluence page add-on to streamline asset management and large-scale 3D model rendering.
- Created a Python-based desktop tool to visualize data for IT meetings.

PROJECTS

LLM-based Incident Triageing App - Developed in Python, this application leverages the LLaMA large language model to classify incidents by analyzing ticket descriptions. It integrates with log systems to perform incident analysis following predefined workflows and automatically provides triaging or remediation actions once the analysis is complete. The application is containerized using Docker and features a CI/CD pipeline designed with GitHub Actions for automated testing and deployment.

MLOps Side Project - Built an end-to-end ML pipeline covering data ingestion, model training (MLflow), deployment (Docker + Flask), and CI/CD automation (GitHub Actions). Implemented monitoring for data drift and service health (Evidently & Grafana). Demonstrated full MLOps lifecycle from development to production.
